Work Experience

Salesforce - Autonomous Control Plane - AI Research Team

[Palo Alto, CA](#)

DATA PIPELINE ARCHITECT

May 2024 - Present

- Architected a real-time ETL pipeline using Apache Kafka and Spark Streaming, repurposing disparate ingestion systems to unify 100M+ daily events into AWS Redshift.
- Devised an entity-based compute sharding strategy across 300K+ nodes, achieving a 40% boost in model accuracy and an 85% reduction in compute costs through dimensionality reduction (PCA/LDA) and signal preprocessing.
- Collaborated with senior researchers to establish robust MLOps frameworks, enhancing model training pipelines and reinforcement learning agents for autonomous infrastructure optimization.
- Led a hybrid cloud AIOps initiative on AWS and on-prem environments, deploying AI-driven monitoring agents for proactive anomaly detection, leading to a shortened incident reconingtion time of 50%.
- Developed automated remediation pipelines that integrated seamlessly with DevOps workflows, enabling self-healing capabilities and minimizing human intervention in critical service outages.

Salesforce - Autonomous Infrastructure Control Plane

[San Francisco, CA](#)

PRODUCT OWNER

Feb. 2023 - May 2024

- One of Salesforce's youngest Product Owners, leading a data-driven product strategy for a VP-level organization spanning five cross-functional teams and 60+ engineers.
- Advised Fortune 500 partners (RedHat, Google, FedEx, etc) on distributed systems and infrastructure optimization, leveraging operational analytics to maximize adoption of Salesforce's first-party platform.
- Unified complex stakeholder requirements into a cohesive product roadmap, simplifying diverse use cases and aligning engineering, product, and executive teams on a singular strategic vision.
- Led an engineering team of 10+ to drive product innovation, expanding portfolio scope and incorporating data-driven insights for feature prioritization and resource allocation.
- Directed 24/7 global operations across 35+ data centers, managing infrastructure that processes 1B+ weekly transactions on 500K machines, ensuring high availability and performance.

Salesforce - Autonomous Infrastructure Control Plane

[San Francisco, CA](#)

SENIOR SOFTWARE ENGINEER

Nov. 2022 - Present

- Recognized in the top 5% of employees for advancing cross-cloud customer initiatives, executing multiple VP/SVP-level initiative, and delivering data-driven enterprise-scale solutions.
- Lead development on base agents in Python that provides system-level health reporting across 300,000+ hosts, leveraging distributed systems concepts and compute sharding to enable real-time monitoring and autonomous health decisions.
- Generalized an autonomous control plane dispatcher built in Golang with Kafka/Zookeeper, furthering automations of OS, firmware, and BIOS patching processes across thousands of compute nodes delivering seamless lifecycle management at scale.
- Automated the full development lifecycle for multiple applications by integrating with CI/CD pipelines, Infrastructure-as-Code (Terraform, Puppet), and MLOps systems, achieving 99.9% deployment success for production releases and reducing deployment time by 10x.

Salesforce - Autonomous Infrastructure, Health Pipeline

[San Francisco, CA](#)

SOFTWARE ENGINEER

Nov. 2020 - Oct. 2022

- Engineered a high-throughput health pipeline using Java, Redis, and Couchbase to process 100M+ daily transactions, supporting advanced data aggregation and statistical analysis. Overhauled query logic and data flows, boosting performance by 30% and expediting new enterprise customer onboarding.
- Built a distributed processing system with custom asynchronous workflows and auto-scaling mechanisms, scaling from 5M to 30M daily requests while reducing latency by 50% during a 6x customer growth period.
- Optimized the customer data ingestion architecture, yielding a 98% reduction in compute time and a 100x improvement in collection throughput, drastically enhancing operational efficiency.

Salesforce - Autonomous Infrastructure, Health Pipeline

San Francisco, CA

ASSOCIATE SOFTWARE ENGINEER

July 2019 - Oct. 2020

- Engineered a distributed agent system handling 5M+ daily requests across 300K machines, implementing high-performance data storage to achieve 5x database scalability.
- Developed scalable monitoring solutions integrated with existing infrastructure, enabling proactive health analysis and automated issue detection to reduce operational overhead.

Salesforce - Marketing Cloud, Google Integrations

Indianapolis, IN

SOFTWARE ENGINEERING INTERN

May 2018 - Aug. 2018

- Built a comprehensive integration suite with Google Cloud API, allowing Marketing Cloud customers to analyze Google data directly within the Salesforce platform, enhancing cross-platform insights.
- Awarded the Futureforce Technology Award for outstanding technical talent and innovation, recognizing significant contributions during the internship (awarded out of 600 interns).

Education

Purdue University

West Lafayette, IN

B.S. IN COMPUTER SCIENCE

Aug. 2015 - May 2019

- Certificate of Entrepreneurship and Innovation

Certifications

AMAZON WEB SERVICES

- CLF-03 AWS Cloud - Foundational
- AIF-01 Artificial Intelligence - Foundational
- SAA-03 Solutions Architect - Associate
- DAA-01 Data Engineering - Associate
- In Progress:
 - SAP-CO3 Solutions Architect - Professional (Most prestigious and difficult cloud certifications)
 - MLA-01 Machine Learning - Associate
 - MLS-01 Machine Learning - Specialty

Skills

Languages: Python, Go, Java, SQL, HTML/CSS/JavaScript (Node, Angular, React), Bash, R

Technologies: Apache Kafka, Apache Spark, AWS (Redshift, EC2, S3, Solutions Architecture), Redis, Couchbase, CI/CD (Strata, Jenkins, Artifactory, Github Actions), Salesforce CRM, Google Cloud API, Git

Expertise: Data Pipeline (ETL) Architecture, Distributed Systems Design, ETL Processes, MLOps, Autonomous Infrastructure Management, Product Strategy, Business Development, Non-Profit Consulting

Philanthropy

Averroes High School

Fremont, CA

BOARD OF DIRECTORS - HEAD OF TECHNOLOGY AND BUSINESS OPERATIONS

June 2022 - Present

- Modernized operations by implementing Salesforce CRM and QuickBooks, while leading strategic fundraising to support institutional growth.
- Increased freshman enrollment by 40%, doubled donor contributions base, and cut administrative costs by 20% through targeted technology adoption and SOP refinement.
- Instituted data-driven board operations, establishing quarterly metrics and a five-year growth strategy focused on enrollment expansion and financial sustainability.

Ravine Non-Profit Solutions*Santa Clara, CA***PRESIDENT AND EXECUTIVE DIRECTOR***Aug. 2020 - Jan. 2023*

- Founded a pro-bono tech consulting organization, growing to 20+ consultants serving Bay Area non-profits with digital transformation solutions.
- Led Salesforce implementations and process optimizations for 6+ non-profits, delivering measurable efficiency gains and improving donor engagement.
- Established a mentorship program connecting tech professionals with non-profit leaders, fostering sustainable technology adoption and independence across partner organizations.
