Work Experience

Salesforce

San Francisco, CA

SENIOR SOFTWARE ENGINEER - AUTONOMOUS INFRASTRUCTURE CONTROL PLANE

Nov. 2022 - Present

- Recognized in the top 5% of employees for spearheading VP/SVP-level cross-cloud customer initiatives and delivering data-driven enterprise-scale solutions.
- Built real-time autonomous control systems, from telemetry agents, data pipelines, and orchestration engines, enabled heuristic-driven decisions through processing 1B+ daily events and actuating 350K+ hosts.
- Translated complex infrastructure tasks into a modular workflow model by rearchitecting manual legacy processes into component-based Directed Acyclic Graphs (DAGs), reducing onboarding time by 20x and simplifying system operations.
- Led high-visibility Sev0/1 investigations across Salesforce, analyzing noisy infrastructure data, triaging incidents, extracting actionable insights, and driving long-term remediations and system enhancements.

DATA PIPELINE ARCHITECT - AI INFRASTRUCTURE RESEARCH TEAM (CONCURRENT WITH SENIOR ENGINEER)

Sept. 2024 - Present

- Designed and deployed real-time data pipelines with Apache Kafka and Spark Streaming to consolidate 100M+ daily events into AWS Redshift, tuning for low-latency ingestion and high-throughput processing.
- Led infrastructure optimization for ML pipelines through a distributed preprocessing framework across 150K servers, cutting compute costs by 50% and boosting model accuracy by 5%.
- Built AI-driven monitoring and remediation systems across hybrid-cloud environments by integrating AIOps frameworks into legacy support stacks and AI agents for autonomous incident response, reducing mean detection time by 50%.

PRODUCT OWNER - AUTONOMOUS INFRASTRUCTURE CONTROL PLANE (CONCURRENT WITH SENIOR ENGINEER)

Feb. 2023 - Aug. 2024

- One of the youngest Product Owners at Salesforce, leading data-driven product strategy for a VP-level organization spanning 5 cross-functional teams. Consolidated complex stakeholder needs into a unified product roadmap, aligning engineering, product, and executive teams around a single strategic vision.
- Advised Fortune 500 partners (e.g., RedHat, Google, State Farm, FedEx) on infrastructure optimization, leveraging analytics to drive platform adoption and enable 30,000+ server expansions and enterprise client onboarding.
- Led 10+ engineers in managing 24/7 global infrastructure across 25+ data centers and 350K machines, driving innovation and prioritization through operational analytics on 1B+ weekly transactions.

SOFTWARE ENGINEER - INFRASTRUCTURE HEALTH PIPELINE

Nov. 2020 - Oct. 2022

- Engineered a high-throughput health pipeline using Java, Redis, and Couchbase to process 100M+ daily transactions, optimizing query logic and data flow to enable advanced data aggregation and statistical analysis, improving performance by 30% and accelerating enterprise customer onboarding.
- Built a distributed processing system with custom asynchronous workflows and dynamic auto-scaling, handling growth from 5M to 30M daily requests while reducing latency by 50% during a 6x customer expansion.
- Redesigned the distributed data ingestion architecture into a centralized, optimized aggregator, reducing compute time by 98% and increasing collection throughput by 100x, significantly improving operational efficiency.

ASSOCIATE SOFTWARE ENGINEER - INFRASTRUCTURE HEALTH PIPELINE

July 2019 - Oct. 2020

- Engineered a distributed server agent to report system health across 200K+ machines, replacing legacy system checks and manual workflows with compoundable atomic components. Increased platform flexibility and reduced onboarding time by 5x.
- Developed novel monitoring enhancements to enable entity-level anomaly and sentiment analysis across the fleet, supporting proactive health insights and automated issue detection. Significantly reduced operational overhead.
- Automated full development lifecycle for multiple applications by integrating CI/CD pipelines, Infrastructure-as-Code (Terraform, Puppet), and auto-remediation systems. Achieved >99% production deployment success and cut release time from weeks to hours.

SOFTWARE ENGINEERING INTERN - MARKETING CLOUD, GOOGLE INTEGRATIONS

May 2018 - Aug. 2018

- Awarded the Futureforce Technology Award for outstanding technical talent and innovation, recognizing significant contributions during the internship (awarded out of 600 interns).
- Built a comprehensive federated data suite with Google Cloud API, allowing Marketing Cloud customers to analyze their Google Trends data directly within the Salesforce platform, enhancing cross-platform insights.

Education

Purdue University

B.S. IN COMPUTER SCIENCE

West Lafayette, IN

Aug. 2015 - May 2019

- Certificate of Entrepreneurship and Innovation

Certifications

AMAZON WEB SERVICES

- SAA-C03 Solutions Architect - Associate, CLF-C03 AWS Cloud - Foundational
- In Progress (Expected in Summer 2025):
 - AIF-C01 Artificial Intelligence - Foundational, DAA-C01 Data Engineering - Associate

SALESFORCE - TRAILHEAD

- Agentforce (AI Agent) Specialist, Data Cloud foundational, Product Owner Certification, Scrum Master Certification

Skills

Languages: Python, Go, Java, SQL, HTML/CSS/JavaScript (Node, Angular, React), Bash, R

Technologies: Apache Kafka, Apache Spark, AWS (Redshift, EC2, S3, Solutions Architecture), Redis, Couchbase, CI/CD (Strata, Jenkins, Artifactory, Github Actions), Salesforce CRM, Google Cloud API, Git

Expertise: Data Pipeline (ETL) Architecture, Distributed Systems Design, ETL Processes, MLOps, Autonomous Infrastructure Management, Product Strategy, Business Development, Non-Profit Consulting

Philanthropy

Averroes High School

BOARD OF DIRECTORS

Fremont, CA

January 2023 - Present

- Led a cross-functional committee to streamline operations by integrating disparate systems (Salesforce, QuickBooks, Blackbaud) into a unified dataset in Salesforce, enabling automated data synchronization and a data-driven cost analysis model.
- Spearheaded business process improvements by integrating Salesforce into the recruitment funnel, implementing 8x8 for call management, and automating workflows, enhancing efficiency, decision-making and decreasing Mean Time to Respond (MTTR) to external communications by 30%.
- Optimized class scheduling and resource allocation by outsourcing low-demand, high-cost courses and restructuring class schedules, resulting in \$200K cost savings and a 25-student capacity increase while enhancing financial stability and collaboration.

BOARD OF DIRECTORS

June 2022 - Present

- Drove a 40% increase in freshman enrollment and doubled donor contributions by implementing targeted technology adoption, refining recruitment pipelines, and leveraging CRM-driven engagement strategies.
- Reduced administrative costs by 20% through SOP refinement, automation, and operational restructuring, optimizing resource allocation and improving financial efficiency.
- Established data-driven governance with quarterly performance metrics and led development of a five-year strategic plan focused on enrollment growth, financial sustainability, and operational resilience.

Ravine Non-Profit Solutions**PRESIDENT AND EXECUTIVE DIRECTOR***Santa Clara, CA**Aug. 2020 - Jan. 2023*

- Founded and scaled boutique pro bono tech consulting group, growing to 20+ consultants delivering digital transformation to Bay Area non-profits, improving operations and extending community reach.
- Served as principal Salesforce architect and led SOP optimization for 6 non-profits, streamlining donor pipelines, automating workflows, and improving fundraising via CRM and social media integration.
- Successfully merged Ravine into Averroes High School, transitioning into a leadership role focused on technology and operations, and applying the consulting framework to scale school-wide digital strategy.
